Kristin Morris
CPS HR Consulting
On behalf of Solano County

Dear Ms. Morris,

I am writing to apply for the Information Technology Analyst (Principal) - GIS position with Solano County. I spent six years as GIS Manager for the Cayman Islands Government, where I headed an enterprise GIS program serving over 20 government departments and 100 commercial subscribers. That role required exactly what this position describes: managing a major information technology program, coordinating multi-departmental initiatives, supervising technical staff, and serving as the organization's subject matter expert for GIS.

My experience aligns closely with the position requirements. I've developed and implemented GIS strategic plans, managed project timelines and resources, and consulted with department stakeholders to translate operational needs into technical solutions. I've handled budget development, IT procurement, RFP preparation, and vendor contract management. On the technical side, I've designed and maintained enterprise geodatabases, deployed server infrastructure, and developed web-based GIS applications. I've also supervised and mentored technical staff, managed hiring processes, and conducted performance evaluations.

Before Cayman, I built the municipal GIS program for the City of College Station, Texas, deploying GIS across all city departments. Since leaving government in 2017, I've worked in software development—building geospatial applications and data integration systems. That work has kept my technical skills current, but I'm looking to return to public sector IT where the work has direct impact on how government serves its community.

I would welcome the opportunity to discuss how my experience managing enterprise GIS programs might support Solano County's information technology initiatives.

Sincerely,

Ryan Pream
